1 Création d'un distancier entre les communes d'Alsace et les UNV

Il y a quatre UNV en Alsace dans les communes de Haguenau, Strasbourg, Colmar et Mulhouse. L'UNV de Haguenau fonctionne par intermittence faute d'effectifs médicaux suffisants.

source méthodologique: cartography sur le site RGeomatic.

1.1 Création des fichiers de base

On utilise:

- fichier des communes avec la geoloc du centre ville: villes_alsace_gps.csv
- fichier des geoloc des UNV: UNV.csv (Alsace et Lorraine)
- création de la matrice des temps (en mn) avec **osrmTableOD**. Cette fonction est limitée à 100 communes par appel => il faut prévoir une boucle pour toutes les faire.

Le fichier créé est enregistré au format csv (distancier_unv_alsace.csv) et le programme qui le crée est désactivé pour ne pas solliciter inutilement le serveur. En cas d'upgrade, il faudra le réactiver.

```
library(osrm)
file1 <- "villes_alsace_gps.csv"
file2 <- "UNV.csv"
villes <- read.csv(file1)</pre>
unv <- read.csv(file2)</pre>
# Certaines ville n'ont pas de coordonnées GPS. Sur les 907 communes, il en reste 861
villes2 <- villes[complete.cases(villes),]</pre>
# le nombre de requêtes est limité à 100
# colonne code_insee
n <- nrow(villes2)</pre>
d1 <- NULL
i <- 1
i <- 1
k <- 90
while(i < n){
  d <- osrmTableOD(villes2[j:k,], "nom_commune", xo = "longitude", yo = "latitude", dfd = unv, idd = "UNV",</pre>
    d1 <- rbind(d1, d)</pre>
    j < -k + 1
    k < - k + 90
    if(k > n)
        k = n
    i = k
}
# une boucle supplémentaire pour les dernières villes
d <- osrmTableOD(villes2[j:k,], "nom_commune", xo = "longitude", yo = "latitude", dfd = unv, idd = "UNV", xd
d1 <- rbind(d1, d)</pre>
names(d1)[1] <- "ville"
write.csv(d1, file <- "distancier_unv_alsace.csv")</pre>
```

1.2 Communes manquantes dans le 67

[1]	ANDLAU	BALBRONN	BOUXWILLER	BUHL	
[5]	CRASTATT	DRACHENBRONN-BIRLENBACH E	BERBACH-SELTZ	WANGENBOURG-ENGENTHAL	
[9]	GRIESHEIM-SUR-SOUFFEL	. NEUGARTHEIM-ITTLENHEIM	JETTERSWILLER	KIRRWILLER

Forbach et Belfort sont un meilleur choix pour 88 communes d'Alsace si Hagueanu est actif et un meilleur choix pour 95 communes d'Alsace si Hagueanu ne fonctonne pas.

2 Fichier mergé

Le fichier **dist** resulte du merging du fichier des disances **d1** et du fichier **villes2** dont on ne conserve que certaines colonnes. On récupère ainsi des infos utiles comme le code INSEE de la commune.
